SUMMARY

Full-stack Engineer with 9 years of experience in QA Automation, focused on helping companies deliver high-quality features faster while minimising risk.

I build full-stack applications using JavaScript, React, and Node.js, combining development with strong system-level thinking to create reliable, scalable, and testable solutions.

I work across frontend, backend, and APIs, contributing to feature development, system design, and business-critical workflows.

My background in law adds a structured, risk-oriented approach, with a focus on data protection, compliance (including GDPR), and system reliability.

CORE SKILLS

- Frontend: React, JavaScript, HTML, CSS
- Backend: Node.js, REST APIs
- Languages: JavaScript, C#, Java
- Testing: Playwright, Selenium, API testing
- AI-assisted development: ChatGPT, Cursor (AI-assisted coding, refactoring, and code analysis), prompt engineering, code validation
- Practices: Clean Code, SOLID, TDD basics
- Tools: Git, Jira, Docker

PROJECTS

AI Test Case Generator (React + Node.js)

Full-stack application that converts business requirements into structured test cases using AI, enabling faster test design and improved coverage.

- Designed and built a full-stack solution (React + Node.js) for transforming business requirements into structured test scenarios
- Developed REST API supporting generation of positive, negative, and edge case scenarios
- Integrated AI-assisted logic to accelerate test design and improve coverage across complex workflows
- Implemented validation and error-handling mechanisms to ensure reliability of AI-generated outputs

HomeHunt – Real Estate Listing & Finder Platform

Full-stack real estate platform for browsing and discovering property listings with dynamic filtering and map-based search.

- Designed and developed a full-stack application for exploring and filtering real estate listings
- Built and integrated frontend and backend services using React and Firebase
- Implemented dynamic search and filtering to improve user experience and data navigation
- Built interactive map-based features using Leaflet for location-based property discovery
- Managed application state using Redux Toolkit to ensure scalable and predictable data flow

PROFESSIONAL EXPERIENCE

Scan&Serve | Fullstack Engineer (Self-employed) | Aug 2025 – Present

Building a fullstack SaaS platform for restaurants, enabling digital ordering, payments, and streamlined guest experience through QR-based workflows.

- Designed and implemented core business flows (ordering, payments, authentication, role-based access) to simplify operations and improve service efficiency
- Built workflows that reduce manual processes and enhance user experience for both guests and staff
- Designed system architecture and data flows with a focus on scalability and performance
- Developed backend services and API integrations to support real-time operations
- Collaborated on product decisions, translating business needs into technical solutions

Tech: React, JavaScript, Node.js, REST APIs, SQL, Docker, CI/CD

MacQuality | QA Consultant / Software Developer in Test | Feb 2021 – Aug 2025

Delivered quality engineering across multiple SaaS products, helping teams release faster, reduce production risk, and build reliable systems used by real users at scale.

- Designed and implemented automated testing strategies (Playwright, C#), reducing manual effort and accelerating delivery cycles
- Collaborated closely with developers to validate business logic and build testable, scalable system designs, reducing rework and improving development efficiency
- Contributed to system design discussions, improving backend/frontend interaction and overall system reliability
- Identified edge cases and gaps early, preventing production issues and minimising costly post-release fixes
- Integrated automation into CI/CD pipelines, enabling faster, more predictable releases
- Used AI tools (ChatGPT, Cursor) to accelerate development and validation workflows, improving team productivity and code quality

TransferRoom (SportsTech SaaS) | Software Developer in Test

- Automated end-to-end workflows across web, API, and backend layers, improving platform stability at scale
- Increased UI test coverage to ~80%, reducing release risk and improving deployment confidence

SmartKYC (FinTech / RegTech) | Software Developer in Test

- Reduced regression time from 2 days to ~1.5 hours, significantly accelerating release cycles
- Owned QA strategy and ensured release readiness in a compliance-heavy system, reducing risk in regulated environments

Pandora (Enterprise Systems) | QA Consultant

- Contributed to quality engineering across large-scale systems, ensuring stable and reliable user flows
- Improved release stability through CI/CD support and root cause analysis, reducing production incidents

Luxoft (UBS project) | QA Engineer | Sep 2018 – Sep 2020

- Built reusable automation components, improving development speed and consistency
- Validated complex business logic and data flows, ensuring correctness in critical systems
- Translated requirements into testable scenarios, reducing misunderstandings and rework

EDUCATION

Bachelor of Software Development, IU International University of Applied Sciences (Distance learning, part-time)
October 2022 – Present

Master of Laws, Donetsk National University, Economics and Law Faculty | September 2006 – June 2011

LANGUAGES

English – Advanced | Danish - Beginner (actively learning) | Polish – Intermediate | Ukrainian – Native
